

TUBULAR DOUBLE FOOD ENVELOPE COMPRISING TRANSFERABLE
COMPONENTS

Abstract: The invention relates to a tubular double food casing. It comprises an outer
5 barrier casing and an inner casing having at least one coloring, aroma substance
and/or flavoring which is transferred to the food. It further relates to a shirred stick
made of two successive segments, the first segment consisting of the shirred barrier
casing and the second consisting of the shirred inner casing and the deshirred, or non-
shirred, start of the second casing being passed through the cavity of the first segment
10 and fixed to the start of the barrier casing.
